

JavaScript + DSA Interview Prep (1-3 YOE)

Arrays

1. Find the largest/smallest number in an array
2. Return the second largest element
3. Remove duplicates from an array
4. Check if two arrays are equal
5. Rotate an array (left/right by k steps)
6. Merge two sorted arrays
7. Move all zeroes to the end
8. Find the missing number from 1 to N
9. Count frequency of elements in an array
10. Find all pairs with a given sum

Strings

1. Reverse a string
2. Check if a string is a palindrome
3. Count vowels and consonants
4. Capitalize the first letter of each word
5. Find the first non-repeating character
6. Remove duplicate characters from a string
7. Check if two strings are anagrams
8. Compress a string (basic run-length encoding)
9. Convert string to camelCase/snake_case

Number Logic

1. Check if a number is prime
2. Generate Fibonacci sequence up to N
3. Factorial using recursion

4. Find GCD and LCM
5. Check if a number is an Armstrong number
6. Sum of digits of a number
7. Convert decimal to binary and vice versa

Objects / Map / Set

1. Count character frequency using object
2. Group words that are anagrams
3. Find duplicate elements using a Set
4. Create a frequency counter using Map

Recursion

1. Calculate factorial
2. Fibonacci using recursion
3. Sum of array elements using recursion
4. Flatten a nested array recursively
5. Reverse a string using recursion

Two-Pointer / Sliding Window

1. Check if an array is a palindrome
2. Find subarray with given sum
3. Longest substring without repeating characters
4. Maximum sum subarray of size K

Stack / Queue

1. Implement a Stack using array
2. Implement a Queue using array
3. Valid parentheses (using stack)
4. Evaluate postfix expression

Miscellaneous

1. Deep clone an object or array
2. Implement `Array.prototype.map()`
3. Memoize a function
4. Retry a failed API call with limit
5. Implement a debounce and throttle
